

SkyCert explains CAA New Zealand Age Requirements

SkyCert.nz

How to use

Highlight the line with the age that you did your last medical

then Highlight the line with the age that you are now

You will need the tests between these lines plus the tests for your current age. E.g. Age 50 at previous medical, you are now 53 so you need an ECG from age 52.

[Spiro] = Spirometry only required if you have smoked in the last 5 years.

[S Eye] = Special Eye Report from CAA approved Optometrist [CVD] using any age bloods. New Bloods not required.

For initial medical requirements refer to the Main SkyCert Page.

CVD risk calc's are required to be done when blood tests are required. It is a good idea for pilots to do the SkyCert predict calc months in advance of their medical to check for a possible problem.
